

## → simplehuman® 5" sensor mirror

Our mini sensor mirror lights up automatically as your face approaches. Its tru-lux light system simulates natural sunlight, allowing you to see full color variation, so you'll know when your makeup is color-correct and flawless. And unlike traditional bulbs or fluorescent lighting, our long-lasting LEDs won't burn out or diminish – even if you were to use the mirror for over an hour a day for 150 years. It recharges with a standard USB port (cable included). The distortion-free mirror is 10x magnification — ideal for close-up work like tweezing or eyeliner and lipstick application. It folds up and stores easily in the included padded travel case.

- tru-lux light system: At 550 lux and with a color rendering index (CRI) of 90, the tru-lux light system is more than twice as bright and more closely simulates natural sunlight than the next best.
- sensor on/off: Automatically lights up as your face approaches the mirror — no need to touch any buttons.
- never change a bulb: Traditional bulb or fluorescent lights fade or burn out too quickly. Our LEDs have been rated to perform like new after 40,000 hours -- that's an hour a day, every day, for more than 100 years.
- optimum magnification: 10x magnification is perfect for close-up work like tweezing or applying eye makeup.
- rechargeable: Recharges using a standard USB port (cable included). One charge lasts up to 5 weeks.
- maximum adjustability: Unfolds into two height options, and the mirror head swivels to the perfect angle for any viewing position.
- distortion-free mirror: Precise curvature for distortion-free optics – even around the edges.
- high reflectivity: Ultra-clear, high-quality glass backed by high-purity aluminum coating provides superior reflectivity and clarity.
- folds down flat: Easy to store and comes with convenient padded travel case.
